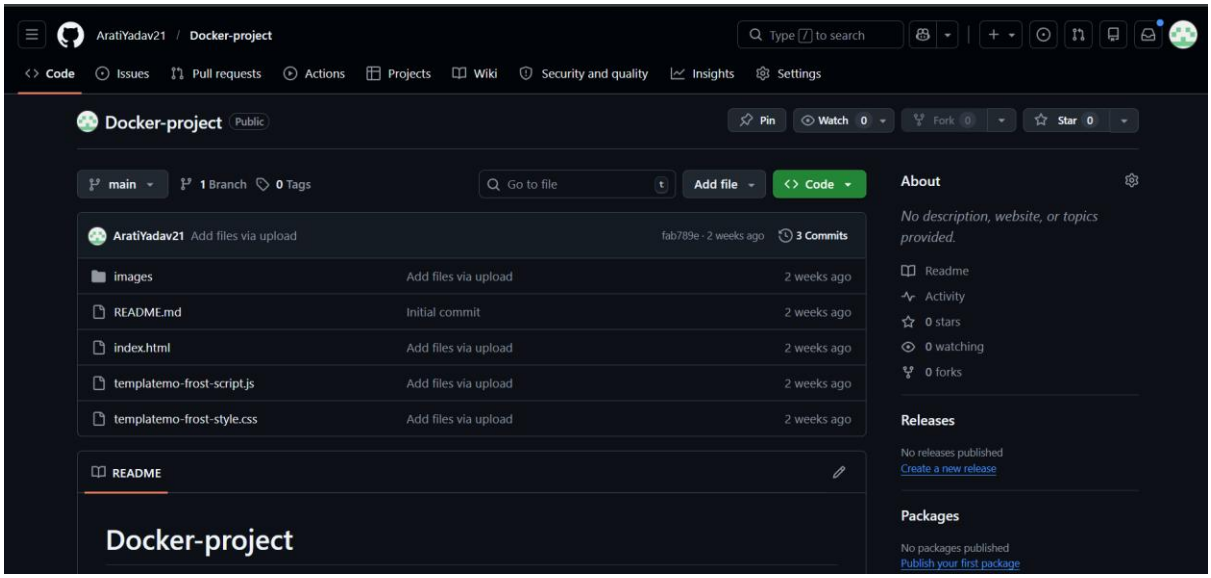
Website Deployment using Docker and AWS EC2

Step 1: Created & Uploaded Website to GitHub

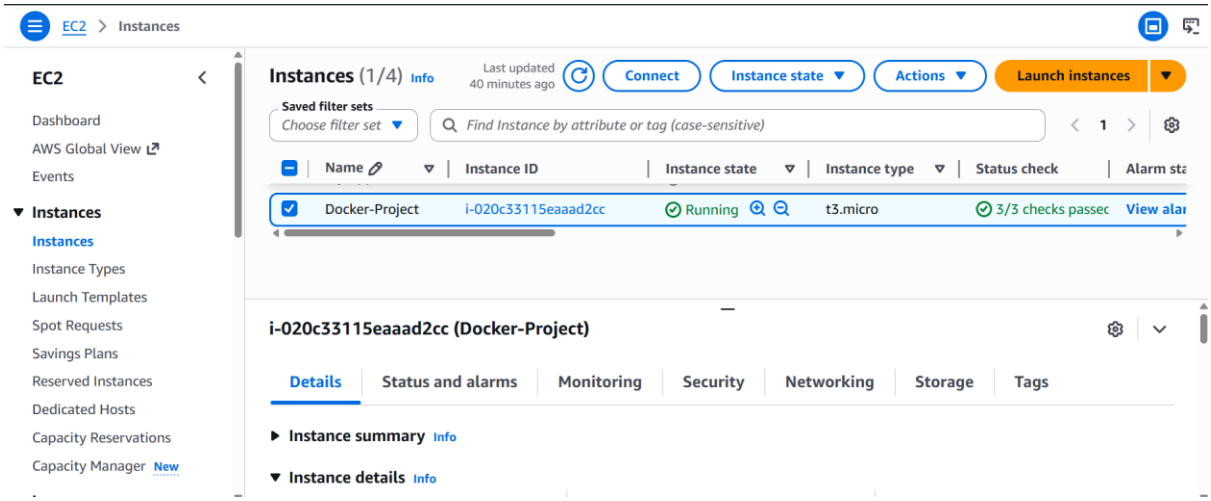
- Created a repository: Docker-project



Step 2: Launched EC2 Instance

- Selected **Ubuntu OS**
- Configured Security Group:
  - Port 22 (SSH)
  - Port 80 (HTTP)

Step 3: Connected to EC2



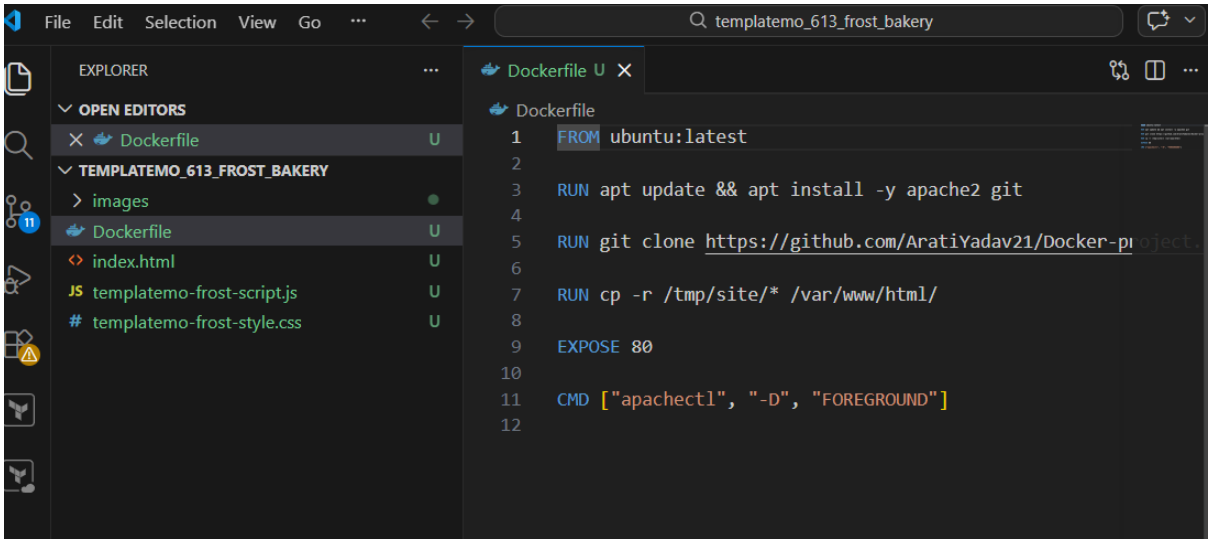
Step 4: Installed Docker on EC2

```
sudo apt update
sudo apt install docker.io -y
sudo systemctl start docker
sudo systemctl enable docker
```

Step 5: Cloned GitHub Repository

```
git clone https://github.com/AratiYadav21/Docker-project.git
cd Docker-project
```

Step 6: Created Dockerfile



Step 7: Built Docker Image

```
docker build -t docker-project .
```

Step 8: Ran Docker Container

```
docker run -d -p 80:80 docker-project
```

```
ubuntu@ip-172-31-44-71:~/Docker-project$ docker run -d -p 80:80 docker-project
cbe33605dfca2f2b63f12e39167e1d8b8acb72fb5624855a88cbd8ef7dc0e38c
ubuntu@ip-172-31-44-71:~/Docker-project$
```

Step 9: Accessed Website

- Opened browser:

http:15.207.84.129 (Public IP)

- Successfully viewed bakery website
